

INSTRUCTORS NAME: Dr. Passent Elkafrawy		
COURSE NAME: Software Engineering	COURSE NUMBER: CS3151	SECTION: 1

Group: Hamed Almehdhar, Hasan Albaiti, Moayad Omar

Section 1

Project idea: PlayGCC is a mobile app that lets players in Saudi Arabia book padel, tennis, football, and swimming venues in real time, and matches them with a verified player when they're short one for a game.

Part 1 Identify User Groups

Potential users of PlayGCC are listed below.

User Group	Role	Frequency of Use	Technical Level
Casual / social players	Book courts and find people to play with	Daily–Weekly	Medium
Recurring teams & padel pairs	Book the same weekly slot as a group	Weekly	Medium
Women & family players	Look for women-only or family sessions	Weekly–Occasional	Low–Medium
Venue owners / managers	List courts and manage bookings and pricing	Daily	Medium–High
Corporate wellness coordinators	Book recurring slots for employee wellness	Monthly–Occasional	Medium

Part 2 Persona Creation

The three personas represent the main user groups who are most likely to use PlayGCC.

Persona 1 Sara Al-Otaibi

Age	27
Education	Bachelor's degree in Marketing
Role	Marketing specialist who plays padel and swims casually a few times a week
Goals	Find a reliable player to fill in when her regular partner cancels, and play in a setting she feels comfortable in.
Motivations	She wants to stay active and social without relying on one fixed group of friends.
Pain Points	Her partner often cancels last-minute, and she is not comfortable joining open games with strangers of unknown skill.
Technical Skill Level	Medium
Usage Context	Books mostly from her phone in the evening, often on short notice.

Persona 2 Faisal Al-Harbi

Age	34
Education	Bachelor's degree in Information Technology
Role	IT consultant who organizes a weekly football match with friends
Goals	Lock in the same weekly slot automatically and split the cost fairly among the group.
Motivations	He wants to keep the weekly game running without the admin overhead of managing it himself.
Pain Points	He re-books and re-messages the group every week, and often ends up fronting the full cost.
Technical Skill Level	Medium–High
Usage Context	Books from his phone once a week, a few days in advance.

Persona 3 Munira Al-Qahtani

Age	42
Education	Bachelor's degree in Business Administration
Role	Manager of a mid-size padel and tennis club
Goals	Keep courts booked at all hours and replace her manual booking process with something her staff can use directly.
Motivations	She wants to grow the club's revenue and reduce the time her staff spend taking bookings by phone.
Pain Points	Weekday afternoon courts sit empty, and double-bookings happen because reservations are tracked on a shared spreadsheet.
Technical Skill Level	Medium
Usage Context	Uses a desktop dashboard at the front desk during the day and checks a mobile summary in the evening.

Part 3 Persona to Requirements Mapping

Persona	Feature Needed	Priority
Sara Al-Otaibi	Quick Match to find a verified player nearby	High
Sara Al-Otaibi	Women-only session filter	High
Sara Al-Otaibi	Two-way ratings after a match	Medium
Faisal Al-Harbi	Recurring weekly booking	High
Faisal Al-Harbi	Split payment among players	High
Faisal Al-Harbi	Waitlist alerts for full slots	Medium
Munira Al-Qahtani	Real-time booking dashboard	High
Munira Al-Qahtani	Demand forecasting for courts	High
Munira Al-Qahtani	Off-peak dynamic pricing	Medium

Part 4 Scenarios and User Stories

Sara Al-Otaibi

Usage scenario: Sara finishes work and wants to play padel, but her regular partner cancels last-minute. She opens the app, taps Quick Match, and filters for a women-only session nearby. Within minutes she is matched with a verified player, books the court, and pays her share through split payment.

User stories

- As Sara, I want to find a verified player nearby so that I don't have to cancel my game when my partner can't make it. •
- As Sara, I want to filter for women-only sessions so that I can play in a setting I feel comfortable in. •

Faisal Al-Harbi

Usage scenario: Faisal organizes a weekly football match with his friends every Tuesday. Instead of re-booking and collecting payment every week, he sets up a recurring booking. Each week the app automatically reserves the pitch and splits the cost among the group.

User stories

- As Faisal, I want to set up an automatic weekly booking so that I don't have to manually reserve and message everyone every week. •
- As Faisal, I want the cost split automatically among the players so that I'm not stuck fronting the bill. •

Munira Al-Qahtani

Usage scenario: Munira manages a padel club whose courts sit empty most weekday afternoons. She checks the dashboard, sees a demand forecast flagging the slow hours, and sets a discount for that window. Her staff manage all bookings from the same dashboard instead of a shared spreadsheet.

User stories

- As Munira, I want to see demand forecasts for my courts so that I can set discounts for slow time slots. •
- As Munira, I want a real-time booking dashboard so that my staff no longer manage reservations by phone or spreadsheet. •
